Chapter 10 continue

Problems of extracting finite resources

Extraction has good and bad sites

- **Good is that it gives useful products**
- **it give jobs in money to local people**

Bad is that it uses a lot of energy

- **It damage the environment**
- **it leaves Holes and scars in the lands**
- **it makes the waste**
- **it destroys the habitat**

Sustainability

Sustainability development what is

Using resources in a way that help us to day without harming future generation

why is sustainability needed

Because many resources are finite and they will run out soon

How chemist help sustainability

- **it reduce uses a finite resources**
- **create processes that use less energy**
- **it use catalyst to save energy**
